Create a Program to Upload Files and Handle Various Web Elements:

Aim: Create a Java project that uploads files and handles various web elements.

Requirements:

Eclipse as the IDE and Java.

Conclusion:

The provided script serves as a foundation for automating file uploads and interacting with web elements using Selenium in Python. Customizations can be made based on the specific requirements and structure of the target webpage. It is essential to consider responsible and ethical web automation practices, respecting the terms of service of the websites being automated.
